

# Safety Seat Checks

## Is Your Child Restrained Properly?

Most crashes occur close to home on roads with low speed limits. When used correctly, car seats can prevent injuries and save lives. Always secure your child properly in the correct restraint. The back seat is the safest place for your child. While air bags can save lives, kids riding in the front sea can be seriously injured or killed when an airbag comes out in a crash. Children 12 and under should always sit in the back seat.

Hartford Fire and Rescue Child Passenger Safety Technicians offer free inspections of car seats and booster seats as they are currently installed in your vehicle. The technicians will assess the safety of the seat and assist parents and caregivers with the proper installation of the seat as well as safely securing the child in the seat.

For further information on current child safety seat laws visit [www.boosterseat.gov](http://www.boosterseat.gov)
